

Amendment to the Claims:

This listing of claims will replace all versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A system for storing of print job data comprising:
 - means ~~adapted~~ for acquiring, into a controller of an associated rendering device, print job data representative of a desired print job, which print job data is comprised of a page description language format associated with a selected printer device;
 - converting means associated with the controller for converting acquired print job data into bitmapped image data;
 - means for generating a printout from the rendering device in accordance with an output of the controller;
 - storage means ~~adapted~~ for selectively storing the print job data in the page description format in a selected storage location of the controller;
 - means ~~adapted~~ for acquiring print status information including data representative of a name associated with the print job data and data representative of a size of the print job data;
 - the storage means including means ~~adapted~~ for selectively storing the print status information associatively with the print job data;
 - means ~~adapted~~ for selectively communicating the print job data to generate an image for display in an associated display device, the print job data corresponding to the print job data stored in the page description format in the storage location;
 - means for receiving selection data in accordance with a displayed image from the associated display device, which selection data includes an instruction to commence at least a second rendering of associated print job information stored in the page description format;
 - the converting means including means for completing a second conversion of the print job information stored in the page description format to the bitmapped image data; and
 - means ~~adapted~~ for selectively communicating the bitmapped image data of the second conversion of print job data to the selected printer device to obtain a printout thereof.

2. (Original) The system for storing of print job data of claim 1 wherein the storage means comprise multiple storage locations for storing the print job data.

3. (Currently amended) The system for storing print job data of claim 2 further comprising selection means ~~adapted~~ for selecting the storage location to store the print job data.

4. (Currently amended) The system for storing print job data of claim 3 wherein the selection means comprise means ~~adapted~~ for storing selection data which pre-authorizes selection of a specified storage location for storing print job data.

5. (Currently amended) The system for storing print job data of claim 3 wherein the selection means include:

means ~~adapted~~ for prompting an associated user for selection data to select a storage location to store print job data associated with the user;

means adapted for receiving user selection data resultant from a prompt of [[a]] the user for [[a]] the storage location to store print job data associated with the user; and

means adapted for storing the print job data in the storage location in accordance with the user selection data.

6. (Currently amended) The system for storing print job data of claim 1 further comprising means ~~adapted~~ for selecting parameters for the desired print job.

7. (Currently amended) The system for storing print job data of claim 6 wherein the parameters which are selected include number of copies, finishing options, and merging of two print jobs, ~~and inclusion of cover sheets~~.

8. (Cancelled)

9. (Currently amended) The system for storing print job data of claim 1 further comprising means ~~adapted~~ for performing raster image processing on the print job.

10. (Currently amended) A method for storing of print job data comprising the steps of:
acquiring, into a controller of an associated rendering device, print job data
representative of a desired print job, which print job data is comprised of a page description
language format associated with a selected printer device;
converting, via the controller, acquired print job data into bitmapped image data;
generating a printout from the rendering device in accordance with an output of
the controller;
selectively storing the print job data in a selected storage location in a storage
location of the controller~~medium~~;
acquiring print status information including data representative of a name associated
with the print job data and data representative of a size of the print job data;
selectively storing the print status information associatively with the print job data;
selectively communicating the print job data to generate an image for display in an
associated display device, the print job data corresponding to the print job data stored in the page
description format in the storage location;
receiving selection data in accordance with a displayed image from the associated
display device, which selection data includes an instruction to commence at least a second
rendering of associated print job information stored in the page description format;
completing a second conversion of the print job information stored in the page
description format to the bitmapped image data; and
selectively communicating the bitmapped image data of the second conversion of
print job data to the selected printer device to obtain a printout thereof.

11. (Original) The method for storing of print job data of claim 10 wherein the
storage medium comprises multiple storage locations for storing the print job data.

12. (Original) The method for storing print job data of claim 11 further comprising
the step of selecting the storage location to store the print job data.

13. (Original) The method for storing print job data of claim 12 wherein the step of selecting the storage location comprises storing selection data which pre-authorizes selection of a specified storage location for storing print job data.

14. (Currently amended) The method for storing print job data of claim 12 wherein the step of selecting the storage location comprises the steps of:

 prompting an associated user for selection data to select a storage location to store print job data associated with the user;

 receiving user selection data resultant from a prompt of ~~[[a]]~~ the user for ~~[[a]]~~ the storage location to store print job data associated with the user; and

 storing the print job data in the storage location in accordance with the user selection data.

15. (Original) The method for storing print job data of claim 10 further comprising the step of selecting parameters for the desired print job.

16. (Currently amended) The method for storing print job data of claim 15 wherein the parameters which are selected include number of copies, finishing options, and merging of two print jobs, ~~and inclusion of cover sheets~~.

17. (Cancelled)

18. (Original) The method for storing print job data of claim 10 further comprising the steps of performing raster image processing on the print job and printing the print job.

Claims 19-32 (Cancelled)
